Office of Field Operations
Border Searches of Electronic Media
February 21, 2019

**Audits of Inspectional of Electronic Media (IOEM):**
- Tactical Operations conducts daily audits on all advanced searches. When discrepancies are identified the HQ PM contacts the Border Security Coordinator or designated official to address the discrepancies with the POE and provide feedback to the PM.
- Tactical Operations conducts monthly audits on a random number of 30 basic searches and are addressed in the same manner above to the Field Office.
- Field Offices conduct daily audits and reviews of the border searches of electronic media in their area of responsibility to ensure compliance with the directive.

**CBP Officer Training for border searches of electronic media (basic and advanced searches):**
- CBP officers were trained in January 2018 via muster on the new directive, which included basic searches and disabling wireless connections.
- New CBP officers receive training on border searches of electronic media at the basic CBP Officer academy.
  - A new reinforcing module for border searches of electronic media in the post-academy is under development.
  - A new annual recurring virtual learning training module for all CBP officers is under development.
- CBP officers who conduct advanced searches receive additional training on the CBP policy and equipment prior to conducting advanced border searches of electronic media.

**New Equipment Pilot – (b) (7)(E):**
- CBP will pilot new equipment for advanced border searches of electronic media beginning in March 2019.
- This equipment, from the company (b) (7)(E), will allow for centralized management of the advanced searches and equipment.
  - Centralized management will allow for reporting and analysis of machine use and metrics on devices searched.
- It will provide an easier user interface for officers to capture the information about the search.
- The (b) (7)(E) equipment will also allow for segregation of the data from the CBP network, providing greater security against viruses.

**Policy/Guidance on Reporting Requirements:**
- There is no additional policy/guidance on reporting requirements other than the directive, memo/muster on the January 2018 directive, and IOEM field explanations.
Inspections of Electronic Media (IOEM) Module Fields:

Reason For Search:
